Improvements in OLAF

(Short) Background

- On-line archiving facility

  - Web-based tool

- Goal is that data providers put most of their time in documentation rather than labels and PDS4 standards

  - Designed for "drag and drop" type of data archiving

Improvements

- Generating a collection only

    - Typically OLAF focuses on a bundle with one Data and Document collection

- Adding non-OLAF data to a collection

    - If labels have been prepared elsewhere (other nodes, user code, etc), it can be added to the collection

        - (The product shows up in the product list)

- Share the archive product

    - Allows a user to send non-final OLAF data to coinvestigators

    - Provides read only-access

    - You get a link that you can share. The link will expire
